

## NICASIO K-8 SCHOOL Marin County, CA

MFT provided structural design for Nicasio Unified School District, to develop the building program and school facility master plan. The 8-acre site is located in a rural setting, and the existing classroom building is located near the original Nicasio schoolhouse built in 1871.

A new multi-purpose building was located for convenient access by the students and for use by the community. A new library and media center building was sited opposite the historic schoolhouse. Also included in the project were two new classrooms, an administration building, a science lab and an art room.

*CASH (Coalition for Adequate School Housing) awarded the Year 2000 Design of Excellence Award for this project.*

Cost \$5M

### Services Performed

Engineer of Record for  
Structural and Seismic Design  
Construction Administration

Completion 2002

### Client

Nicasio Unified School District
